Doors

Doors using Sashless Double
Hung Window Inserts

Close the door and let the air in.

Due to their innovative design, the popular Aneeta Vertical Slider can be fitted directly into doors, providing access and security whilst still allowing ventilation in one simple and contemporary solution.

Sashless Door Inserts

2 Pane Double Hung Window

Providing ventilation without the need to open the door, Aneeta Vertical Sliders fitted into doors are perfect for all areas of the home.

With the system's slim lines, minimal space requirements and ability to be locked in a partially open position, it is the ideal solution for the architect, specifier or home owner where no other opening windows within the room are available.

Benefits

- + An opening window in a door
- + Doors can be kept securely locked at night, and the sashless unit can also be locked in a partially open position
- + Provides ventilation in a secure door system
- + No flapping of doors in the wind
- + Easy to attach a flyscreen to the sashless unit, eliminating the need for flydoors, saving room and money

Applications

- + Suitable for hinged, bi-folding, sliding and fixed door panels
- + Aneeta Vertical Slider Door inserts (with 6mm glass option) are slim enough to fit into standard 40mm timber doors and commercial grade aluminium doors without modification.
- + Able to provide ventilation in French door sets where no other ventilation is available (i.e. bedrooms, apartment blocks, etc.)
- + Install in one leaf of bi-folding door sets so ventilation can be gained without opening any doors
- + Laundry doors (ventilate that drier!)

Note: Not all door types are suitable for sashless windows and only 6mm versions are generally recommended (due to weight restrictions). Refer to Aneeta Windows for correct manufacturing details.
